# INDIANA NUT NURSERY

J. FORD WILKINSON, Proprietor

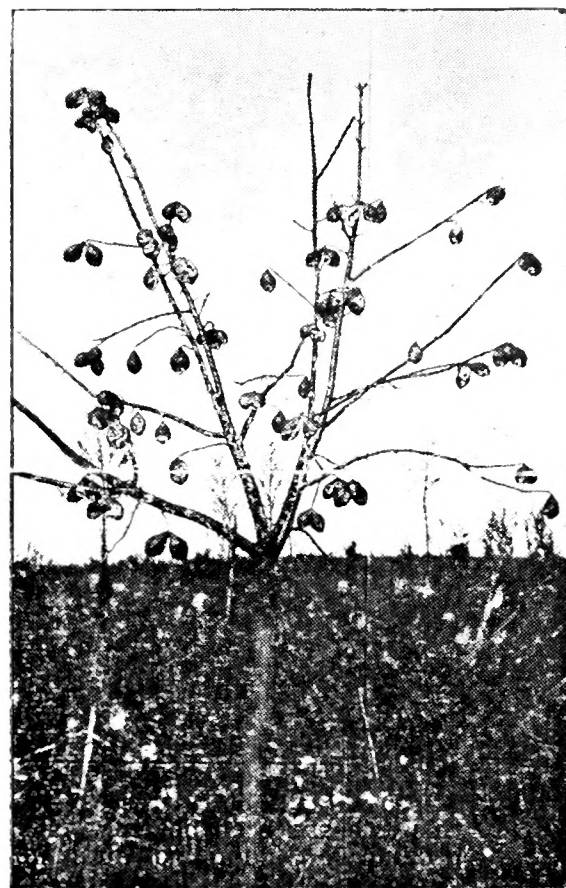

ROCKPORT, INDIANA

Eight year old STABLER WALNUT tree bearing its fourth crop of nuts.

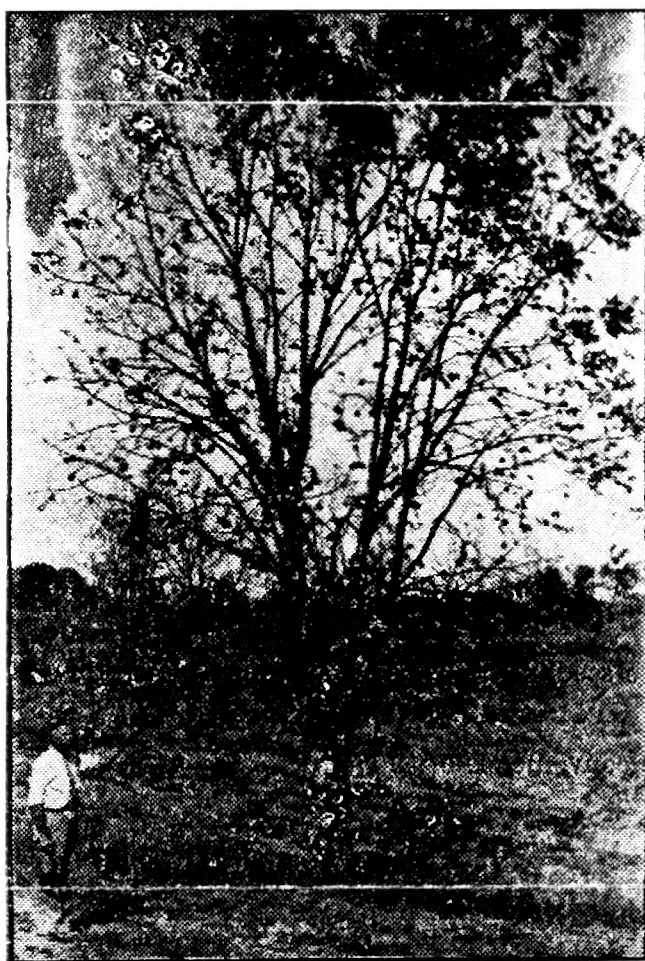

Eight year old THOMAS WALNUT tree, nuts look small due to distance picture was taken.

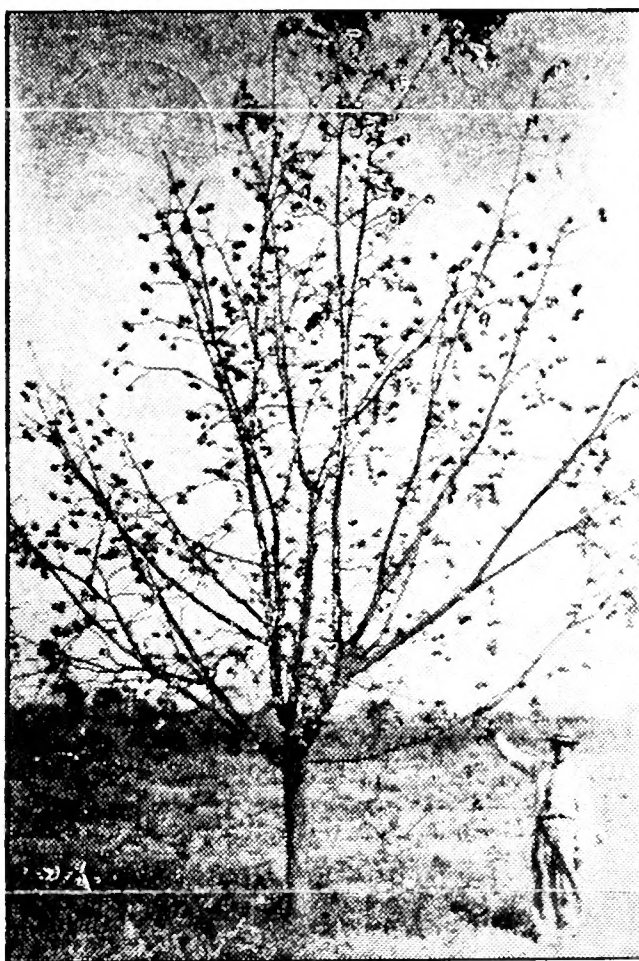

Close up view of a six year old OHIO WALNUT tree.

The above trees are in the commercial planting of more than one thousand walnut trees of Mr. Harry R. Weber, which is only one mile from my nursery.

Ten year old STABLER WALNUT tree. This tree has borne regularly since four years old. Many of the Stabler walnuts have only one kernel which comes out whole when cracked.

Ten year old THOMAS WALNUT tree bearing a bountiful crop of nuts. This variety cracks well, kernels come out in quarters and halves.

Ten year OHIO WALNUT tree standing in a pasture lot and not cultivated. This variety is also a good cracker, and a prolific bearer.

Have also a limited supply of the Lamb Curly walnut trees, and Rohwer and Stambaugh, two of the newer varieties.

Walnut kernels are one of nature's best foods, and the only nut known that retains its original flavor after being cooked.

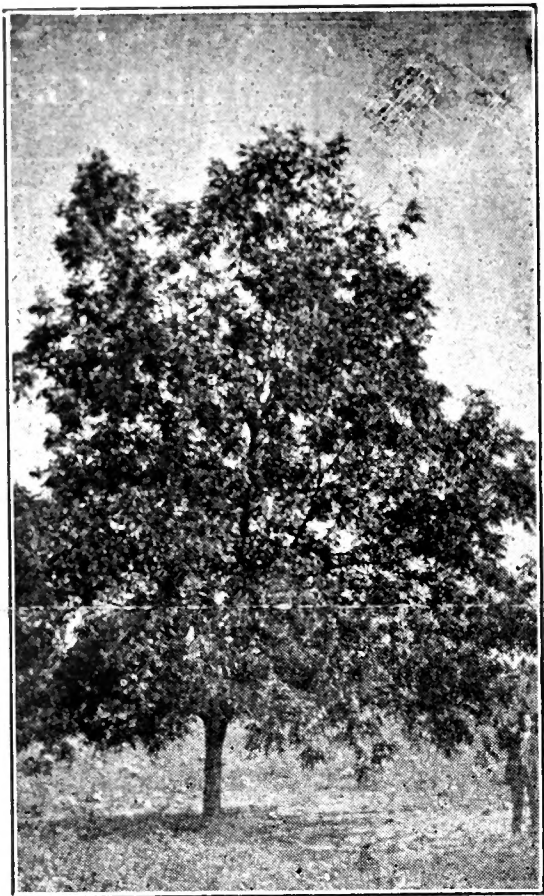

These kernels are now extensively used by candy makers, bakeries as well as in the home.

A planting of these trees is a very sound and lasting investment, whether it be a commercial orchard or a few trees for home use. Mr. Weber sells these walnuts from his orchard at \$5.00 per bushel.

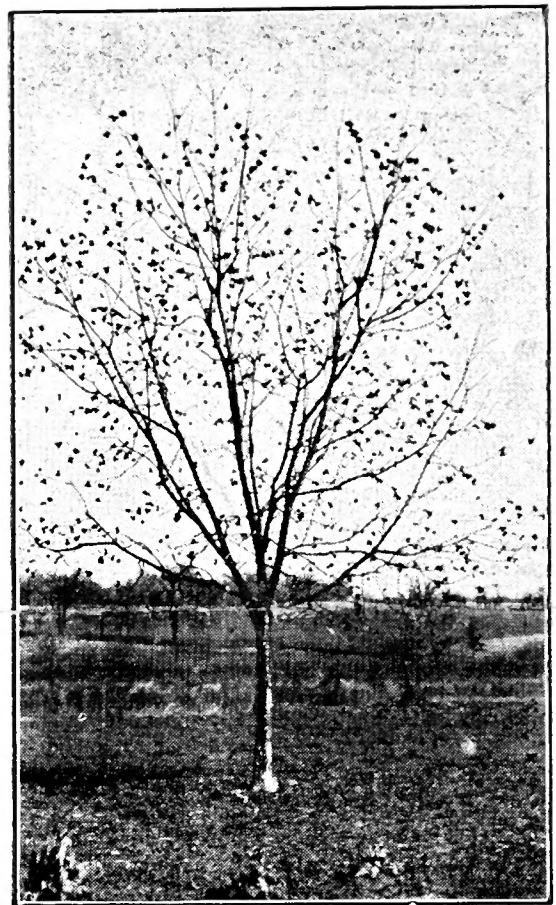

If you do not make an orchard planting of these fine budded walnut trees, then why not plant a few trees along your roadside, fence rows, pasture lot, or waste places, and reap the profits of a nut crop as well as shade.

By time a walnut tree is eight years old one crop of nuts will pay for the tree, then it will bear for future generations, and in the end yield a valuable log.

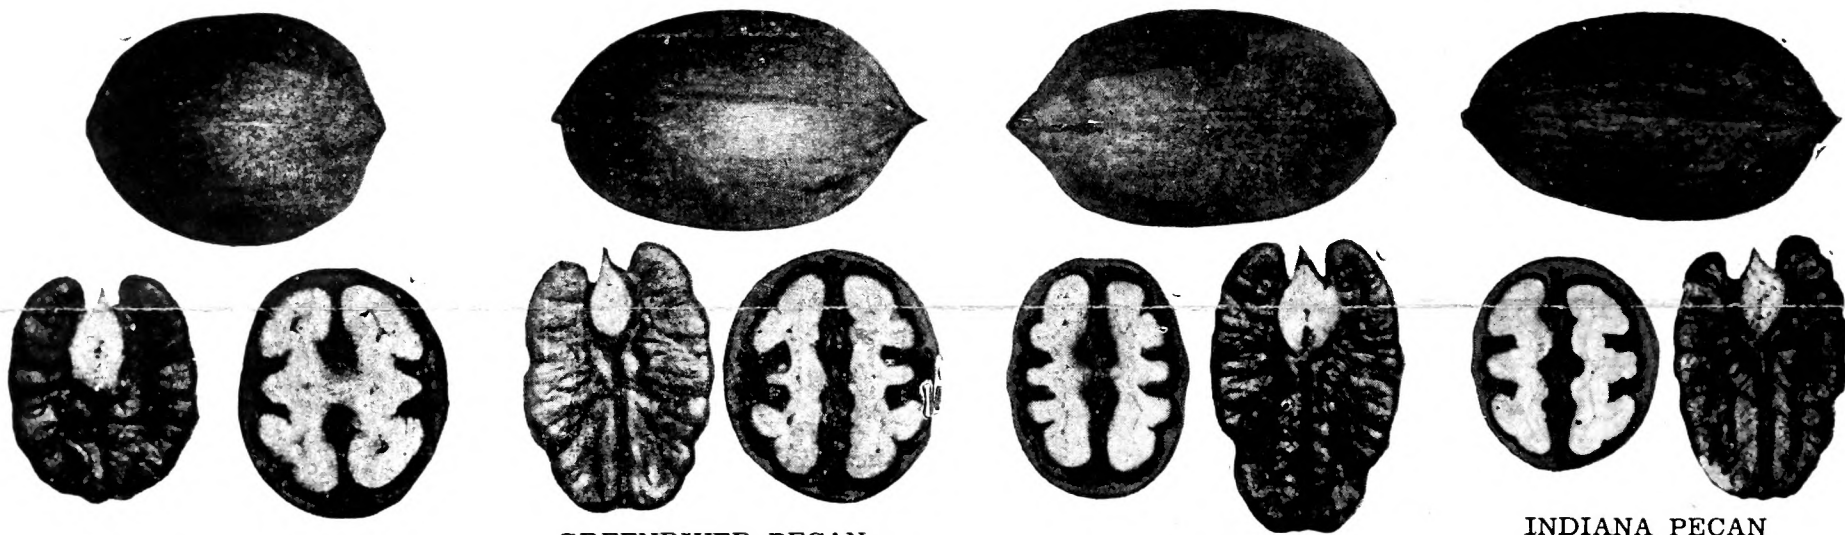

INDIANA PECAN tree. Without any special care this tree has been bearing since seven years old, and produced 125 pounds of nuts two years ago at twenty-two years old.

GREENRIVER pecan tree, bearing since five years of age, producing 40 pounds at nine years old and 75 pounds in 1937 at fourteen years old.

MAJOR PECAN

GREENRIVER PECAN

POSEY PECAN

INDIANA PECAN

Busseron pecan is very similar to Indiana, and Butterick is of Major type.

No more lasting investment can be made than a planting of pecan trees, there are many of these trees in this territory from 100 to 300 years old still producing wonderful crops of nuts.

Pecan trees make beautiful shade for the lawn as they are not bothered by insects common to many kinds of trees, also they do not shed their leaves until after severe frosts.

The nuts from these budded varieties sell for 25c per pound, while nuts from the native seedling trees sell for much less, then these budded varieties are regular, early and prolific bearers.

Nuts do not have to be harvested as soon as ripe, gathering may be delayed to suit the convenience of the gatherer.

Nuts are not perishable and may be kept the entire season without special care.

Catalog price of Pecan or Walnut trees:

	Each	Per 10
2x3 feet	\$1.75	\$16.50
3x4 feet	2.00	18.50
4x5 feet	2.25	21.00
5x7 feet	2.50	22.50

#### Special Early Fall Price

On all cash orders of \$10.00 or more received by November 20-39 a discount of 15% will be allowed from above prices. All my walnut trees are one year old, many of which are 8 feet tall, have a number of specimen pecan trees 2 and 3 years old that are from 10 to 12 feet.

For these large pecan trees, and quantity lots, especially of walnut, write for prices.
